

Westweld II Pro Series Vinyl Windows

SUPER SPACER® STRUCTURAL FOAM SPACER

West Windows are custom made with the latest Warm Edge Technology - Super Spacer® - the world's only 100% foam, NO-Metal Warm Edge spacing system. Super Spacer blocks the heat escape path, reduces the risk of condensation, retains optional gas between the panes, and provides one of the best thermal performances in the industry.

Cross Section

Window shown with optional sash reinforcement for high wind zone applications. The reinforcement used and placement of reinforcements will depend on the window test grade required.

New Construction Vinyl Windows...

Since 1949

Westweld II Pro Series Vinyl Windows

Westweld II Double Hung

- 3/4" Clear Insulated Glass with NO-Metal Super Spacer® is standard with numerous glazing options available, such as our energy saving high-performance Low-E² with argon gas which achieves the Energy Star rating in all fifty states.
- Built-in brickmold profile J-channel with extruded 1-3/4" nail fin for efficient new construction installation. Frame depth is 3-1/4".
- Vinyl interior frame extensions for 4-9/16" and 6-9/16" wall depths reduce job-site labor expense. Clip for wood interior frame extensions is also available.
- Matching picture window and architectural shapes with 3/4" insulated glass are available. The beveled exterior frame and brickmold J-channel look of the Westweld II Series provides a pleasant appearance that complements any exterior style.
- Fusion welded frame and sash construction produces a strong, long lasting, leak proof joint that will provide years of trouble free service.
- The Westweld II utilizes a sloped sill design, not a pocket sill found on many vinyl double hung windows. This means that water flows off the sill faster and cleaning debris from the sill of the window is much easier.
- Both top and bottom sashes tilt in for easy cleaning from inside the home.
- Sashes are weatherstripped with two rows of high performance fin-seal weatherstripping to minimize air infiltration. The fully weatherstripped and interlocking meeting rail provides a tight, secure seal between the sashes.
- Positive locking cam action sash locks provide secure closure by drawing the top and bottom sash close together.
- High quality AAMA Certified vinyl used in the frame and sash construction is warranted to not crack, pit, or corrode under normal use. The color is through and through, meaning the only maintenance required is an occasional cleaning with soap and water.
- Several grid between the glass (GBG) options allow you to customize the look of the Westweld II to match any architectural style.
- Extruded aluminum half or full screen is strong and long lasting.
- Euro-White color for a pleasing appearance.
- Frame accessory grooves allow the Westweld II to be adapted to many different situations.

Westweld II Picture Window

The Westweld II Pro Series Double Hung window combines energy efficiency, great looks and impressive features. Check out the following list of standard features and available options and we think you will find the Westweld II is a great choice for your new construction project.
